SSC | Janata Mahavidyalay And Junior College, Nagbhir

2016 – 2017 | 64%

PROJECT DETAILS

Project 1 | Team Lead and Smart Go-Kart Developer

As the Team Lead and Smart Go-Kart Developer, I led a team of developers in transforming a normal go-kart into a smart vehicle. The project involved developing a web application that could be used to control and monitor the go-kart's performance using a mobile device or a computer. We also integrated electronic components such as ESP32, tilt sensor, and LDR sensor into the go-kart's design.

Project 2 | Storytelling App for Children Using Natural Language Processing (NLP)

The project's objective is to create a mobile app employing natural language processing to convert written text into sign language images. This innovative app is tailored for hearing-impaired children, with a focus on translating English words into Indian Sign Language, addressing the specific needs of this demographic in India. This project represents a significant advancement in assistive technology, offering hearing-impaired children a personalized way to access stories. It underscores the importance of technology development that caters to diverse communities, ensuring inclusivity and accessibility for all.

TECHNICAL SKILLS
